

Banda Group International | Capabilities

Banda Group International, LLC (BGI) is a small business entity (SBE), a certified small disadvantaged business (SDB), a certified service-disabled veteran-owned small business (SDVOSB), and a certified minority business enterprise (MBE) engaging in projects across the United States (U.S.) and in diverse international locations. BGI provides environmental, health, and safety (EH&S) as well as environmental remediation and characterization, site security, security escort services, and construction oversight and management for a wide range of clients. BGI staff work closely with clients to establish strong working relationships and deliver project success, while providing solutions to complex problems and ensuring client satisfaction.

Selected Project Experience & Clients

Los Alamos National Laboratory (LANL), Newport Nuclear News BWXT (N3B), Environmental Services

Providing environmental characterization and remediation on a task order basis under a Master Services Agreement (MSA). Services include soil, sediment, sludge, and water sampling, waste management, well drilling, storm water pollution control, contaminated site characterization and remediation, decommissioning and demolition, site restoration, geodetic, geophysical, and radiological surveys, high explosives screening, and support for regulatory and stakeholder interactions.

LANL, Triad National Security, Construction Services Multiple Award Task Order Contract (MATOC)

Providing general construction services at LANL under the MATOC. Along with our joint venture partner, GCON, BGI is providing services including design-build (D-B) construction, design-bid-build (DBB) construction, maintenance, and alteration of various facilities. Current projects include the construction of a new generator pad and associated infrastructure and the removal and remediation of a decommissioned diesel tank.

DOE, LANL, N3B, Middle Delta Prime Road (MDPR) Cleanup Project

Systematic sampling to identify and remove hazardous and radiological waste including a comprehensive subsurface investigation to identify geophysical anomalies suggestive of legacy waste and to define the nature and extent of contamination. BGI collects and analyzes confirmation sample results and assesses human health and ecological risks. BGI remediates contaminated areas and samples to determine proper waste disposal.

National Aeronautics and Space Administration (NASA), Goddard Space Flight Center, Occupational Safety Program Services

Comprehensive occupational health and safety program services for the entire Goddard Space Flight center including more than 3,000 government and 5,000 contract personnel covering office, industrial, and laboratory spaces. BGI provided information management, regulatory review and assessment, facility inspections, facility design reviews, cryogenic safety analysis, incident investigations, safety training, and test safety operations.

DOE, National Nuclear Security Administration (NNSA) LANL Project Management Office (PMO) Nuclear Project Construction Oversight Support

Nuclear construction and management services at LANL, including field support and quality assurance. BGI provides technical, supervisory, and administrative personnel project oversight and expertise ensuring nuclear construction projects are completed according to appropriate standards. This work includes construction management and review, project performance analysis, risk management, engineering reviews, and quality control oversight.

DOE, SNL, Groundwater Treatability Study

A phased treatability study of in situ bioremediation as a potential technology to treat groundwater contamination at SNL. BGI constructed, mobilized, and operated an above-ground injection system of bioremediation solution into multiple wells. BGI orchestrated the injection of more than 530,000 gallons of solution and monitored the performance of in situ treatment for trichloroethene and nitrate groundwater contamination.

DOE, Sandia National Laboratories (SNL), Mixed Waste Landfill & Evapotranspirative Covers

BGI maintains engineered evapotranspirative covers at three disposal sites operated under *Resource Conservation and Recovery Act* (RCRA) permits. BGI installs gravel, provides supplemental watering, performs erosion control, and repairs the covers in accordance with the site's Storm Water Pollution Prevention Plan (SWPPP) and the Post-Closure Care Permit.

DOE, NNSA, LANL / SNL / Nevada National Security Site (NNSL), Technical Support of Defense Nuclear Safety

BGI staff worked to determine whether or not controls were adequate to meet nuclear explosive surety standards. BGI's senior technical advisors and nuclear explosive safety consultants conducted nuclear explosive safety evaluations associated with design attributes of new and refurbished nuclear weapons to prevent nuclear detonation or deflagration, given an adverse environment, unauthorized act, or deliberate unauthorized use.

DOE, Consolidated Nuclear Security (CNS), Y-12 National Security Complex, Security Escort Services

Security escort contractor for the DOE's Y-12 National Security Complex. "Q-cleared" escorts facilitate site access for various subcontractors working on a variety of projects including construction, industry, and environmental, health, and safety (EH&S) tasks. BGI leverages its institutional knowledge of DOE's site security and protective service's procedures ensuring clients are prepared to navigate the many layers of complex site security.
